Education

Bachelor of Science in Computer Science (Honours) Wilfrid Laurier University, Waterloo, ON

September 2022 – Present

PROJECTS

Asteroid Destroyer (Game)

- Developed a space-themed shooter game using Python, Turtle, and Pygame.
- Designed player controls, missile-firing mechanics, and enemy behaviors.
- Implemented collision detection, scoring system, and cheat mode for testing.
- Created engaging retro-style visuals and sound effects.

Asteroid Destroyer (Website)

- Built a download page for the game using HTML, CSS.
- Designed a responsive and interactive UI for players.
- Implemented keyboard controls, scoring system, and enemy AI mechanics.

Study Buddy – Academic Productivity Web App

- Designed and developed a responsive web application to enhance academic productivity.
 - Implemented a **study timer** with customizable hours, minutes, and seconds, featuring an alert sound upon completion.
 - Created a **motivational feature** that displays randomized encouragement messages.
 - Developed an **interactive flashcards system** with the ability to add, remove, and flip cards to reinforce learning.
 - Built a **to-do list** allowing users to dynamically add and delete tasks for efficient task management.
 - Ensured seamless user experience through intuitive navigation and a clean, engaging UI.
-
